

Bullet Resistant Pocket Door with Mechanical Lock

Sample inset door handle,
multiple options available

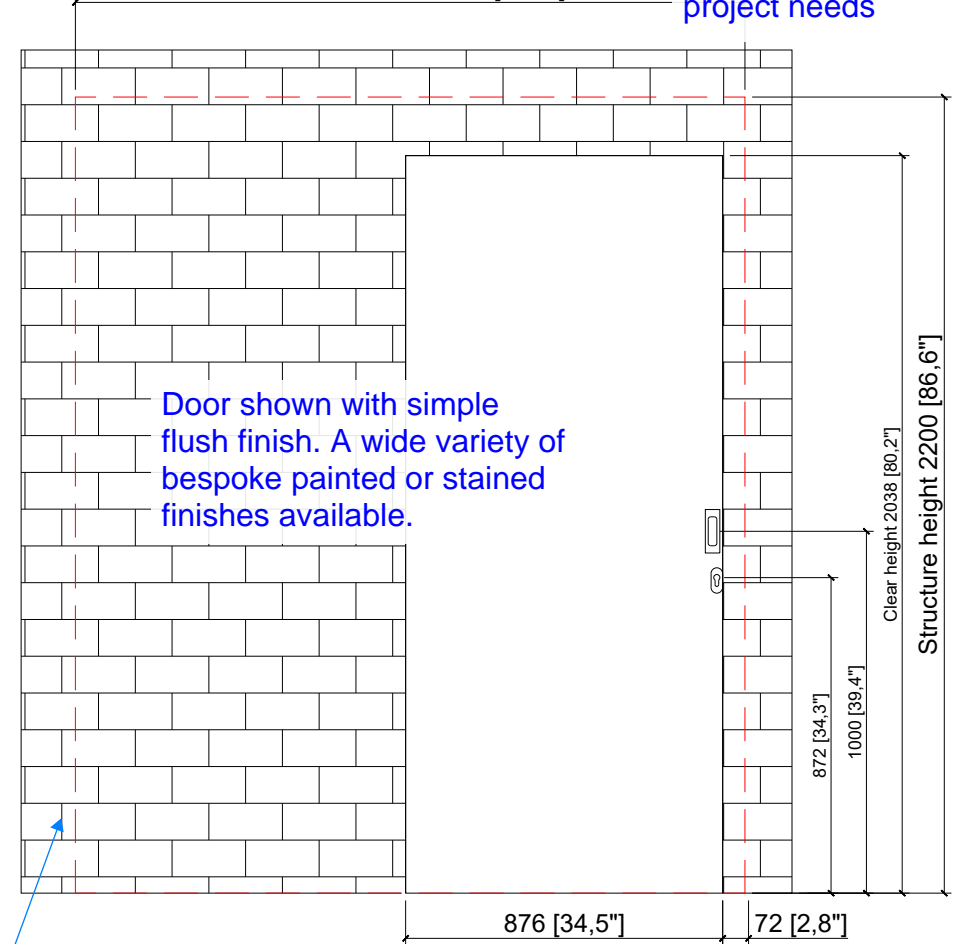

External elevation

Structure width 1850 [72,8"]

Internal elevation

Structure width 1850 [72,8"]

This structure's dimensions shown are merely samples. Width and height is fully custom to project needs

Dashed red lines indicate profile of door frame inside of wall

In addition to door leaf, rail, and other hardware, product comes with entire frame system (shown in red). This provides added security and stability for the whole system as well as reinforcement for the wall pocket.

As safe rooms are typically lined with our ballistic paneling, this example pocket frame is hollow between horizontal posts. However, we can also add a full sheet of steel armor or bullet resistant steel to cover pocket area as well, as desired by client needs.
